

PRIVATE PLACEMENT MEMORANDUM

Accelerate Point Search Fund

Sarah Kim

Capital Target

\$480,000 (100 Units @ \$4,800)

Date of Issue

April 2026

CONFIDENTIAL · For Authorized Investors Only

This Private Placement Memorandum is confidential and has been prepared solely for informational purposes in connection with the proposed offering described herein.

This memorandum does not constitute an offer to sell or a solicitation of an offer to buy any security.

EXECUTIVE SUMMARY

Fund Overview

Accelerate Point Search Fund is a self-funded search fund formed by Sarah Kim to acquire and operate a vertical SaaS or technology-enabled services business. The fund is raising \$480,000 across 100 units at \$4,800 per unit to support a 24-month active search.

Searcher Profile

Sarah brings an exceptionally rare combination of elite technical training (BS Computer Science, MIT), management consulting experience (McKinsey & Company), and product management at scale (Google, \$1B+ revenue products). Her background uniquely positions her to identify and create value in software-enabled businesses.

Investment Thesis

Technology-enabled services and vertical SaaS businesses serving SMBs are underserved by traditional private equity but represent an attractive search fund opportunity: lower multiples than pure-play SaaS, recurring revenue, high retention, and significant operational improvement potential.

SEARCHER BACKGROUND

Education

Sarah holds an MBA from Stanford Graduate School of Business (Class of 2025) with concentrations in Finance and Technology Management, and a BS in Computer Science from MIT. She completed the GSB ETA course and was a teaching assistant for the course in her second year.

McKinsey Experience

Sarah spent 2 years at McKinsey & Company in the San Francisco office, working in the Technology, Media & Telecom practice. She led engagements for Fortune 500 technology companies on digital transformation, pricing strategy, and M&A integration.

Google Experience

Prior to her MBA, Sarah spent 4 years at Google as a Product Manager, most recently managing a suite of SMB advertising products with \$1.2B in annual revenue and a team of 12 engineers and designers. She developed deep expertise in SMB software buying behavior and product monetization.

INVESTMENT CRITERIA

Target Sectors

Primary: Vertical SaaS serving SMBs (field service management, dental/medical practice management, property management, professional services workflow). Secondary: Tech-enabled services with proprietary software components (managed IT, digital marketing services, specialized staffing with tech platforms).

Technical Requirements

Preference for businesses with proprietary software or technology that creates switching costs and is difficult to replicate. Not interested in businesses where technology is purely a productivity tool without customer-facing value.

Financial Profile

Revenue of \$3M-\$15M, EBITDA of \$0.8M-\$4M, EBITDA margins of 20%-45%. Prefer NRR (net revenue retention) of >90% and logo retention of >85%. ARR growth of 10%+ preferred.

Geography

Headquarters-agnostic. Sarah is open to relocating. Preference for companies that can operate with distributed/remote teams, consistent with modern software business models.

FUND TERMS

Structure

Accelerate Point Search Fund is organized as a Delaware LLC. Sarah Kim is the sole managing member. \$480,000 search capital across 100 units at \$4,800 per unit.

Search Period

24 months from first capital close. Extension of up to 6 months available with majority investor approval.

Acquisition Rights

Standard search fund pro-rata acquisition participation rights. 1.5x step-up on search capital at acquisition.

Carried Interest

20% carried interest above 8% preferred return. 4-year vesting with 1-year cliff from acquisition close date.

RISK FACTORS

Solo Search Risk

As a solo searcher, the fund carries key-person risk. Sarah will mitigate this by building a strong board and advisory team pre-acquisition, including operators with CEO experience in SaaS businesses.

Valuation Risk

Technology and SaaS businesses typically trade at premium multiples (6x-12x EBITDA or revenue-based multiples) compared to traditional search fund targets. Sarah is focused on businesses that have been passed over by SaaS-focused PE due to size or complexity, creating a valuation arbitrage opportunity.

Technical Complexity

Acquiring a software business introduces technical due diligence requirements beyond standard financial and operational diligence. Sarah's technical background mitigates but does not eliminate the risk of undiscovered technical debt or architecture issues.

Market Risk

SMB-focused SaaS businesses are exposed to SMB economic cycles. A downturn that causes SMB customer churn could reduce revenues and EBITDA more rapidly than traditional services businesses.
